

Claude Code One-Click Kit - User Guide

User Guide — Step-by-Step for Absolute Beginners

Even if computers/AI/electronics are new to you, **just follow along**.
Jargon is kept to a minimum. Take it one line at a time.

 Full reference: [README.en.md](#) ·  Korean: [사용설명서.md](#)

0. What is this?

- **Claude Code** = an AI that **does work for you** (organizing files, writing small programs) when you **ask in plain language**, made by Anthropic.
 - This **One-Click Kit** = a small helper that lets you install, run, and manage Claude Code by **just pressing numbers**, with no commands to memorize.
 - The kit runs from **two files. Keep them together in the same folder.**
 - `Claude-Code_One-Click_Kit.bat` → the file you double-click
 - `menu.ps1` → the Korean menu (actual logic)
-

1. Before you start (2 things)

1. **A paid plan or account**

- Claude **Pro** or **Max** subscription, or an Anthropic **API** account.
- **! A free Claude.ai account will not work.** (Anthropic policy)

2. Internet connection

No need to install Node.js or dev tools — the kit installs everything the official way.

2. How to choose a menu item (learn this first)

Double-click `Claude-Code_One-Click_Kit.bat` and a menu appears. There are **two ways** to choose — use whichever is easier.

- **Way A (easy):** Use **↑ ↓ arrows** to move to a line → **Enter**.
 - The current line is **highlighted**, so you confirm with your eyes before pressing — **fewer mistakes**.
- **Way B (fast):** Just press a **number key** (1–8) — it runs immediately (no Enter needed).
- **Quit:** the **Q** key.
- Press a wrong key? It tells you *"No such number, please choose again."*

3. Install (first time only)

1. **Double-click** `Claude-Code_One-Click_Kit.bat`.
 - (`menu.ps1` must be in the same folder)
2. Choose **1 Install**.
3. Read the notice (requirements, official URL), press **Enter**, and installation runs automatically (1–2 min).
4. `Install complete!` means success.

"Windows protected your PC" warning

- This is a **normal warning** for a file downloaded from the internet.
- Click the small **More info** link → then **Run anyway**.

Already installed?

- The kit detects it and says *"Already installed"* without reinstalling. Just go to [3] Start.
-

4. Check the login/account guide (optional)

If you're unsure, press menu **2 Login/account guide**. It explains:

- Which account you need (Pro/Max or API)
 - How login works (the browser opens automatically the first time you press [3] Start)
 - How to switch accounts (inside Claude: `/login` , `/logout`)
-

5. Start (open Claude)

1. Choose menu **3 Start**.
 2. Claude Code **opens right away** (it doesn't ask for a folder).
 3. **On first run, a login screen appears.** The browser opens automatically — log in as you normally would.
-

6. Actually using it

- After login, just **ask in plain language** — no commands to memorize.
- Examples:
 - `sort the photos in this folder by date`
 - `make me a simple notepad program`
 - `summarize what this file is about`

Handy commands (also in kit menu **4**)

Type these in the Claude prompt. (*usually not needed*)

Command	Meaning
<code>/help</code>	Show all commands
<code>/exit</code> or <code>/quit</code>	Exit
<code>/clear</code>	Start a fresh conversation (keeps memory)
<code>/login</code> · <code>/logout</code>	Log in / log out
<code>/status</code>	Show current status
<code>/usage</code>	Show usage and cost

To quit

- Type `/exit` inside Claude; it closes and returns to the kit menu.

7. Update (get the latest)

- Menu **5 Update** updates to the latest version.
- Native installs **auto-update in the background**, so an occasional check is enough.

8. When something goes wrong

First, press menu **6 Diagnose/fix**. The auto check (`claude doctor`) reports what's wrong.

Symptom	Fix
<code>claude not recognized</code>	Close the window and re-run the kit (common right after install)
Login fails	Verify your paid plan/account and internet
Garbled characters	Right-click title bar → Properties → font to Malgun Gothic or D2Coding
Install fails	Temporarily disable antivirus and retry, or check internet

Symptom	Fix
<code>menu.ps1</code> not found	Make sure <code>.bat</code> and <code>menu.ps1</code> are in the same folder

If it still fails, reinstall via menu **1 Install**.

9. Check the version

- Menu **7 Version** shows the installed version. (Helpful to mention when asking for support.)
-

10. Clean uninstall

1. Choose menu **8 Uninstall**.
 2. Pick one:
 - **[1] Program only** → keeps settings and chat history (reusable later).
 - **[2] Everything** → deletes settings, login, and history too. **Irreversible**.
 3. "Everything" asks for **one more Y/N confirmation** to prevent mistakes.
-

11. File/folder locations

- **Kit files:** `Claude-Code_One-Click_Kit.bat`, `menu.ps1`, `README.en.md`, `GUIDE.en.md`, `LICENSE`, `NOTICE`, and PDF docs (`README.en.pdf`, `GUIDE.en.pdf`, etc.) — all in **one folder**.
 - **Where Claude Code installs:** `your user folder\.local\bin\claude.exe`
 - **Settings/login/history:** the `your user folder\.claude` folder and `.claude.json`
-

12. FAQ

Q. Does it cost money? A. The kit is free. But using Claude Code requires Anthropic's **paid plan or API** (paid).

Q. Is it safe? A. Installation only comes from **Anthropic's official URL**. The kit downloads nothing else and collects no personal data.

Q. The black window scares me. A. You only need arrows and numbers. If it still bothers you, use the **Desktop app** (claude.com/download) — no terminal needed.

Q. Can I keep just one of the two files? A. No. `.bat` and `menu.ps1` must both be in the same folder.

13. License/copyright (summary)

- This kit: **Apache License 2.0**, © 2026 SoDam AI Studio. Commercial use/modification/redistribution allowed (conditions: ship LICENSE & NOTICE, state changes, keep notices).
 - This kit is an **unofficial** helper, **not affiliated with Anthropic**. Claude Code itself and its **commercial use** follow **Anthropic's terms**. (Details in [README.en.md](#) §16)
