

Claude Code One-Click Kit - README

Claude Code One-Click Kit

A Korean-first helper that **installs, runs, and manages Claude Code on Windows with a single double-click**. Written so that even **first-time** computer/AI/electronics users can follow along, with jargon kept to a minimum.

1. What is this?

- **Claude Code** = an AI tool by Anthropic that **does work for you** (organizing files, summarizing documents, writing small programs) when you ask in plain language.
 - **This One-Click Kit** = a small helper that lets you install, run, and manage Claude Code **with numbered menus instead of typing commands**.
 - The kit runs from **two files**:
 - `Claude-Code_One-Click_Kit.bat` — the **launcher** you double-click
 - `menu.ps1` — the Korean **menu body** (the actual logic)
 - ⚠ **These two files must stay together in the same folder.**
-

2. Quick Start (3 steps)

1. **Double-click** `Claude-Code_One-Click_Kit.bat` .
2. Choose **1 Install** to install Claude Code. (*first time only*)
3. Choose **3 Start** — Claude opens. The first time, a **browser login** appears once. → Done!

After that, just ask in plain language, e.g. `organize this folder` .

 **Afraid of the black window?** There is also a **Desktop app** (no terminal) → claude.com/download A paid plan/account is still required.

3. Prerequisites / Required Programs

Required

Item	Detail
OS	Windows 10 (1809+) or Windows 11
Paid plan or account	Claude Pro or Max subscription, or an Anthropic API account
Internet	Needed for install, login, and use
Hardware	4 GB+ RAM, x64 or ARM64

! A free Claude.ai account alone cannot use Claude Code. (Anthropic policy)

NOT required (no need to install)

- **Node.js / dev tools / Git** → not needed. The official **native installer** handles everything.
- `PowerShell` and `curl` used by the kit are **built into Windows**.

Optional

- **Git for Windows** — lets Claude Code do a bit more in some tasks. Works fine without it.

4. How to Download

(1) Get this kit

- The kit consists of **two files** (`Claude-Code_One-Click_Kit.bat` , `menu.ps1`) plus docs.
- If you got it from GitHub, **unzip it** and make sure the two files are **in the same folder**.

(2) Get Claude Code (automatic)

- Pressing menu **1 Install** downloads and installs it automatically from **Anthropic's official source**:
 - Official install script: <https://claude.ai/install.ps1>
- You do not need to download anything else manually.

5. How to Install

1. **Double-click** `Claude-Code_One-Click_Kit.bat` → the menu appears.
2. Choose **1 Install** (use ↑ ↓ + Enter, or press the **1** key).
3. Read the notice and press **Enter** → installation runs automatically (1–2 min).
4. `Install complete!` means success.

Already installed? The kit detects it and says "Already installed", without reinstalling.

Manual install (reference)

In PowerShell:

```
irm https://claude.ai/install.ps1 | iex
```

6. How to Run

1. **Double-click** `Claude-Code_One-Click_Kit.bat`.
2. Choose **3 Start** → Claude Code opens.
 - It launches **immediately without asking for a folder** (start location: your user/home folder).
3. **On first run**, a browser opens for **login**. Log in as you normally would.

To quit, type `/exit` (or `/quit`) inside Claude.

7. How to Use (How it Works)

- After login, just **ask in plain language** — no commands to memorize.
- Examples:
 - `sort the photos in this folder by date`
 - `make me a simple notepad program`
 - `summarize what this file is about`
- **How it works (brief):** the `.bat` launches the PowerShell menu (`menu.ps1`), which runs the official `claude` command. PowerShell renders the Korean UI to avoid character corruption.

8. Full Menu Reference

How to choose: ↑ ↓ **arrows** + **Enter**, or press the **number key** directly. Quit with `q`.

No.	Function	What it does
1	Install	Installs Claude Code (first time). Skips if already present
2	Login/account guide	Explains which account you need and how login works
3	Start	Runs Claude right away (no folder prompt)
4	Help/commands	Shows in-app commands (<code>/help</code> , etc.)
5	Update	Updates to the latest version (<code>claude update</code>)
6	Diagnose/fix	Auto health check (<code>claude doctor</code>) + FAQ
7	Version	Shows installed version (<code>claude --version</code>)
8	Uninstall	Clean removal (2-step confirmation)

No.	Function	What it does
Q	Quit	Closes the kit

9. Commands

Inside Claude (type in the prompt)

Command	Meaning
<code>/help</code>	Show all commands
<code>/exit</code> or <code>/quit</code>	Exit Claude Code
<code>/clear</code>	Start a fresh conversation (keeps project memory)
<code>/login</code> · <code>/logout</code>	Log in / log out
<code>/status</code>	Show current status
<code>/usage</code>	Show usage / cost

In the terminal (reference)

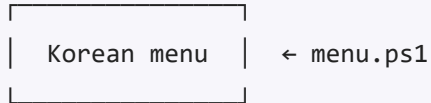

Command	Meaning
<code>claude</code>	Run Claude Code
<code>claude --version</code>	Show installed version
<code>claude update</code>	Update to latest
<code>claude doctor</code>	Auto-diagnose install/config

The kit runs the terminal commands for you, so beginners never have to type them.

10. Full Workflow

[Double-click Claude-Code_One-Click_Kit.bat]

|

First time: [1] Install → [2] Login/account guide

Use: [3] Start → (first-time browser login) → work in plain language

Manage: [5] Update / [6] Diagnose / [7] Version / [8]

Uninstall

1. **Install** [1] — once.
2. **Check login guide** [2] — know which account you need (optional).
3. **Start** [3] — run Claude. Browser login on first run.
4. **Use** — ask in plain language.
5. **Manage** — update / diagnose / uninstall as needed.

11. How to Update

- Menu **5 Update** updates to the latest (`claude update`).
- Native installs **auto-update in the background**, so an occasional check is enough.

12. How to Uninstall

1. Choose menu **8 Uninstall**.
2. Pick one:
 - **[1] Program only** — keeps settings and chat history (reusable later).
 - **[2] Everything** — deletes settings, login, and history too. **Irreversible**.
3. "Everything" asks for **one more Y/N confirmation** to prevent mistakes.

Removed locations: program `%USERPROFILE%\local\bin\claude.exe`,
config `%USERPROFILE%\claude` and `%USERPROFILE%\claude.json`

13. Troubleshooting

First, press menu **6 Diagnose/fix** — the auto check (`claude doctor`) reports the cause.

Symptom	Fix
<code>claude not recognized</code>	Close the window and re-run the kit (common right after install)
Login fails	Verify your paid plan/account and internet
Garbled characters	Right-click title bar → Properties → set font to Malgun Gothic or D2Coding
Install fails	Temporarily disable antivirus/security and retry, or check internet
<code>menu.ps1 not found</code>	Make sure <code>.bat</code> and <code>menu.ps1</code> are in the same folder
Menu shows but Korean is broken	Use Windows Terminal or change the font (above). Usually fine since it's PowerShell-based

If it still fails, reinstall via menu **1 Install**.

14. File / Doc / Install Locations

Kit files (keep together)

File	Role
<code>Claude-Code_One-Click_Kit.bat</code>	Double-click launcher (ASCII, opens the menu)

File	Role
<code>menu.ps1</code>	Korean menu body (actual logic)
<code>README.md</code> / <code>README.en.md</code>	KO/EN reference
<code>사용설명서.md</code> / <code>GUIDE.en.md</code>	KO/EN step-by-step guide
<code>LICENSE</code>	Apache License 2.0 full text
<code>NOTICE</code>	Copyright/trademark/disclaimer
<code>README.pdf</code> / <code>README.en.pdf</code>	PDF version of the README (same folder)
<code>사용설명서.pdf</code> / <code>GUIDE.en.pdf</code>	PDF version of the guide (same folder)

Claude Code install locations (reference)

Item	Path
Program	<code>%USERPROFILE%\local\bin\claude.exe</code>
Config/login/history	<code>%USERPROFILE%\claude</code> , <code>%USERPROFILE%\claude.json</code>

15. Safety Notes

- On first run, Windows SmartScreen may warn **"Windows protected your PC"** — normal for a downloaded file. → **More info** → **Run anyway**.
- The kit only uses **Anthropic's official URL** (`https://claude.ai/install.ps1`) for installation. It downloads nothing from other sources.
- The kit **does not collect or transmit** your personal data (runs locally).

16. License · Copyright · Commercial Use

This section is written under **strict standards**. Please read before use.

(1) This kit's license

- This kit (`Claude-Code_One-Click_Kit.bat` , `menu.ps1` , and docs) is distributed under the **Apache License 2.0**. Full text: [LICENSE](#).
- **Copyright:** © 2026 SoDam AI Studio.
- Apache-2.0 permits **commercial use, modification, and redistribution**, provided you:
 - distribute the `LICENSE` and `NOTICE` files together;
 - state that you changed any modified files;
 - keep copyright/trademark/notice texts intact.

(2) Rights to Claude Code and trademarks (important)

- This kit is an **unofficial** helper and is **not affiliated with, endorsed by, or sponsored by Anthropic**.
- This kit **does not bundle or redistribute** Claude Code. It only **downloads it from Anthropic's official source** at runtime.
- "Claude", "Claude Code", "Anthropic" are **trademarks of Anthropic**, used here only for identification/description.
- **Use of Claude Code itself** is governed entirely by **Anthropic's terms, policies, and license** (Anthropic Commercial Terms / Usage Policy).

(3) Commercial use — keep these separate

Subject	Commercial use
This kit (scripts/docs)	Allowed under Apache-2.0 (if conditions are met)
Claude Code (Anthropic product)	Per Anthropic's terms. Requires a paid plan/account. Check Anthropic's terms directly for scope

In short: **you may use the kit commercially, but commercial use of Claude Code is subject to Anthropic's separate terms.** Do not conflate the two.

17. Disclaimer

- This kit is provided **"AS IS"** with **no warranty of any kind**.
 - **You are solely responsible** for any outcome or damage from using this kit.
 - Install/uninstall features modify/delete files on your computer.
"Everything" removal is irreversible — use with care.
 - Fees, data handling, and the accuracy of outputs from Claude Code follow **Anthropic's terms** and your own responsibility.
-
